Make your next commit matter.

An open-source hackathon that helps students build skills, contribute to real projects and create value for society.

A first contribution. A lasting connection.

Prepared projects and clearly scoped tasks give students a clear starting point in an open-source community.

A clear path into open source

01 **Join through school**

Students join with a school email and their own GitHub account.

02 **Choose a scoped task**

Find a suitable issue in code, data analysis, testing or documentation.

03 **Build your contribution**

Develop and test your work, and explain the choices you make.

04 **Submit for review**

Open a pull request. Maintainers review the work and decide what to include.

A place for your students to contribute.

Connect learning to work that others can use. The programme is open to students with a participating school email.

What the programme includes

Prepared projects

Scoped tasks and starting materials that make it easier to begin.

Different ways to contribute

Code, data analysis, tests and documentation all have a place.

A visible contribution

Work students can discuss and show, subject to project review.

School and contribution awards

Recognition for useful work and support for other contributors.

Recognition for work that matters

- School with most contributions
- School with best average contributions
- Best project contribution
- Best peer support

The first edition

The first edition is in preparation. Schools and organisers agree the calendar, computing arrangements and award criteria. Participation details will follow.
